

Fit It, Frame It, Fill It. Finished.

They say that the one thing you can count on in any construction project is an unexpected delay. Now there's another – it's the time-saving performance of NoricF4 Custom Metal ICF Frames from Reward Wall Systems. We took your requests to the drawing board to develop the industry's most innovative, fully integrated, custom steel door and window frames for ICF construction. We've incorporated all the features you need to deliver all the ease and functionality you'd expect from Reward Wall Systems.

NoricF4 for Doors and Windows:

- 1 Pre-welded and pre-assembled to any custom specifications
- 2 Accepts any insulating concrete form EPS foam thickness
- 3 Gypsum drywall return on interior side for any size
- 4 Continuous integrated acute angled flange concrete anchor
- + Manufactured out of 14-gauge steel
- + Optional brick mold or other return style or dimension on exterior side
- + Optional design with a thermal break

NoricF4 for Doors:

- 5 Comes fully prepped and fabricated for all door hardware
- 6 Press in weather seal installs easily with no tools
- + Optional sidelight or transom windows

NoricF4 for Windows:

- 7 Integrated concrete placement and consolidation opening, with sill filler plate
- + Smooth window head and jambs
- + Frame mullion for ready-to-set window glass
- + Optional glazing stops

Do More In Less Time.

Save time, labor, and construction steps with the industry's most innovative, fully integrated steel door and window frames created specifically for ICF construction – NoricF4 from Reward Wall Systems.

The pre-welded, pre-assembled, two-in-one NoricF4 acts as both the “block out” buck and the frame for window and door openings. So, you're able to reduce construction time by eliminating the buck assembly, squaring and stripping and reducing bracing and support, while providing the framing that can come ready to receive doors and windows of any manufacturer and of any size.

Save Time At Every Step.

Even beyond its integrated buck-and-frame convenience, the NoricF4 continues to save you time, reduce steps and facilitate other trades with features that include:

- Manufactured drywall returns on one or both sides of the frame for faster finishing
- Fully prepped and fabricated to accommodate any door hardware type and comes ready to hang doors
- Shipped fully assembled, directly to the construction site
- Continuous concrete anchor surrounds the entire frame, eliminating the need for any anchor bolts

Built To last.

Constructed of 14-gauge steel, the NoricF4 is available for any ICF form size – fitting snugly and securely around the EPS foam thickness. There so many customizable features it will prove to be the most versatile, stable, and durable custom metal ICF frame on the market.

Complies with the blast resistance and force protection requirements of the DOD Minimum Antiterrorism Standards for buildings.

When it comes to meeting your demands for more innovative building products – we're already there.
